Partner & Reseller Management Module

Technical Development Reference

Version 1.0.0 | Enterprise-Level CRM Module

Generated: April 08, 2026

Module Name:	Partner & Reseller Management
Version:	1.0.0
CRM Platform:	Perfex CRM
Min. CRM Version:	2.3.0+
Database Engine:	MySQL 5.7+ / MariaDB 10.2+
PHP Version:	7.4+ (8.0+ recommended)
License:	Commercial

1. Module Architecture

The Partner & Reseller Management Module follows MVC architecture integrated with Perfex CRM. It provides admin panel for management, partner portal for self-service, API layer for integrations, multi-channel notifications, analytics engine, and optional AI integration.

2. Database Schema

The module uses 10 primary tables: tblpartner_resellers (partner profiles), tblpartner_contacts (contacts), tblpartner_deals (deal registrations), tblpartner_commissions (commission tracking), tblpartner_payments (payment records), tblpartner_documents (KYC), tblpartner_notifications, tblpartner_activities, tblpartner_settings, and tblpartner_territories.

3. Core Components

Main controllers: Partner_reseller (admin functions) and Partner_portal (partner-facing). Key models: Partner_model, Partner_deal_model, Partner_commission_model, Partner_analytics_model. Views organized by function: dashboard, partners, deals, commissions, reports, portal.

4. Security Features

Role-based access control, password hashing, CSRF protection, SQL injection prevention, XSS protection, file upload validation, partner data isolation, activity logging, API token authentication, and rate limiting.

5. Integration Points

Perfex CRM integration (auto-create leads, staff sync, client linking), notification channels (Email/WhatsApp/Telegram), external systems (payment gateways, accounting software), multi-website support with territory management.

6. API Documentation

RESTful endpoints for partners, deals, and commissions. Token-based authentication required. Key endpoints: GET/POST /api/partners, GET/POST /api/deals, POST /api/deals/{id}/approve, GET /api/commissions, POST /api/commissions/{id}/pay.

7. Deployment

Upload to /modules/partner_reseller/, install via Setup → Modules, configure settings (email, WhatsApp API, commission structure, self-signup). Server requirements: PHP 7.4+, MySQL 5.7+, mod_rewrite,

SSL recommended, 256MB memory limit.

8. Maintenance

Regular tasks: weekly backups, monthly review of pending items, quarterly optimization, annual security audit. Common issues covered: login problems, lead creation, commission calculations, notifications. Performance tips: add indexes, enable caching, use pagination.

Database Tables Reference

Table	Key Columns	Purpose
tblpartner_resellers	id, company_name, email, status, commission_type, commission_value	Partner master data
tblpartner_contacts	id, partner_id, first_name, last_name, email, is_primary	Contact management
tblpartner_deals	id, partner_id, deal_number, client_name, status, estimated_value	Deal tracking
tblpartner_commissions	id, partner_id, deal_id, commission_amount, status, paid_date	Commission records

Customization Examples

Adding Custom Commission Logic:
Edit partner_reseller_init.php function calculate_commission() to implement custom rules.

Custom Approval Workflow:
Modify deal status enum in install.php and add corresponding logic in Partner_reseller controller.

UI Customization:
Modify assets/css/partner_reseller.css for styling, update view templates for layout changes.
